Dear Sean,

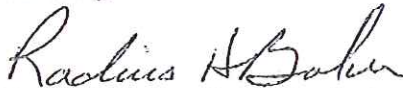

It gives me great pleasure to commend you on the outstanding job your company did for Valley View School. As you know building a high school is an expensive adventure for a community. We were able to build such a facility and get it within our budget because of your concept of building design. Your company did an outstanding job of providing the space needed for a functional building without alleviating the design concept but still providing the educational needs of the district.

We have been in our building for ten years. We continue to have school administrators visit our facility to attain ideas for projects they either are beginning or have begun but wish to meet specific needs. This building is not only a showcase for the Jonesboro area, Craighead County, but also for this region. We are very pleased with the building but as pleased with the commitment you and your company have made to Valley View School to make sure we continue to have a functional educational facility.

Your concept of "Design Build" is key to obtaining a functional yet cost effective facility. Because of the state of the present economy, your knowledge and commitment is a vital step in the construction industry.

Thank you, for all you have done for our school and we look forward in continuing our relationship.

Sincerely,

Radius H. Baker, Superintendent
Valley View School
